

TO ORDER CYLINDER ROD BELLOWS - Hypelon

First identify the type of cylinder in use on the filter press. The two most common types are Tie Rod (front and back flange are held together by bolted rods) and welded construction (usually the mounting flange is round).

In order to make a bellows assembly the mounting flange and attachment point to the moving plate should be measured. We custom finish the ends of the bellows to fit these attachments. The rod diameter and stroke are then required for the minimum ID and overall bellows length.

Mark up the attached drawing and fax it to 603-433-6673 for a quotation.
